

Enterprise Reporter for File Storage Analysis

Easily perform capacity planning with efficient storage analysis and reporting

Analyzing storage capacity and usage across large enterprises is a daunting task, but necessary for capacity planning, data cleanup and finding top violators of usage policies. Moreover, analyzing storage capacity and trends is critical when planning and budgeting for a data migration project, whether for internal consolidations, upgrades or restructuring, or for larger merger and acquisition projects.

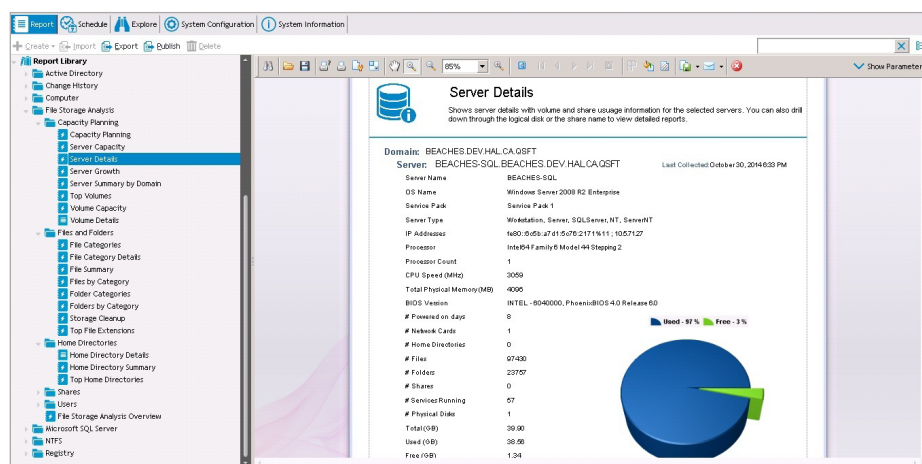

Unfortunately, analyzing storage for each storage device is time-consuming, taking precious time away from other critical responsibilities.

Enterprise Reporter for File Storage Analysis is a scalable solution for analyzing and reporting on storage device (for example, Windows file servers, NAS, SAN) capacity and allocation by user, department, server, share and more.

Predefined and customizable reporting tools make it easy to perform capacity planning and pre-migration analysis, and enforce storage policies, enabling IT to be proactive about storage requirements, increase IT productivity and spend limited budget dollars more wisely.

BENEFITS:

- Clean up assets to increase capacity or for migration
- Discover what files are disproportionately impacting storage capacity
- See which departments or users are the top offenders for storage policy violations
- Get notifications when storage capacities near or exceed limits
- Analyze data requirements for storage consolidation and migration projects
- Monitor file storage growth rates

The Server Details report shows volume and share information for selected servers. You can also drill down through the logical disk or share name to view detailed reports.

FEATURES

File storage consolidation preparation —

Get ready for storage migration and consolidation projects by identifying and excluding files that are unused, orphaned or that violate storage usage policy.

File storage usage reporting —

Inspect allocation and usage of file storage resources by server, share, owning user and content type. Use this information to enforce policies or for departmental chargebacks.

File storage capacity planning —

Plan for future storage growth based on historical trends and predictions. Get notified when free space on Windows file servers and network filers approaches alarming limits.

Scalable data collection —

Scale to storage environments of any size. Schedule collections during off-peak hours to minimize the impact of data collection on network and server performance, and leverage distributed collection architecture for load balancing.

Customizable reports —

Use predefined reports with advanced filtering and multiple formats, including PDF, HTML, MHT, RTF, XLS, XLSX, CSV, text and images. Create customized reports with added attributes and advanced filtering.

Perform efficient, effective data analysis and satisfy the unique informational needs of your organization.

Automated reporting workflows —

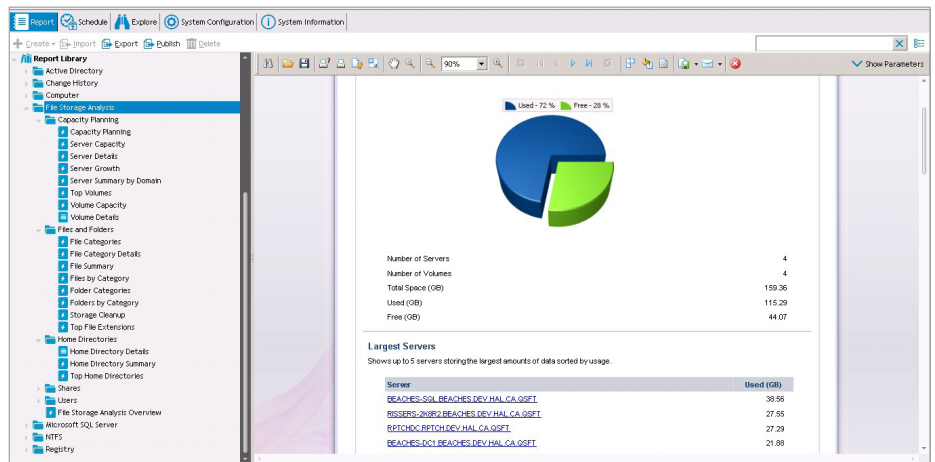

Automate report generation and delivery for multiple report consumers according to different schedules.

Common reporting portal —

Export reports to Knowledge Portal for a unified reporting interface across the entire family of Quest governance, risk and compliance solutions.
